

INSULATION

Pallet cover

In short:

- ✓ High insulation capacity due to compact, high-density foil and high-quality aluminum coating
- ✓ Keeps products at the right temperature for a long time
- ✓ Reusable
- ✓ Immediately available for block pallets and euro pallets

During relatively long transports where goods may be exposed to extreme external conditions, it can be quite a challenge to keep your goods at a constant cool temperature. Many fresh products are sensitive not only to light and moisture, but also to excessively high or irregular temperatures. Transportation at a low and constant temperature is necessary to maintain the quality of the products. Pallet covers can offer a solution for this.

A pallet cover is a bag that can be pulled all the way around a pallet, protecting the contents from outside temperature influences. This is because the outside of the cover has a high-quality aluminium coating. This reinforces the insulating effect of the pallet cover. In addition, heat energy and radiation are reflected on the outside. On the inside of the pallet cover, cold air can be reflected. It works like an awning on a car standing in the burning sun.

De Ridder Packaging's pallet covers are made of compact film with a high density, which increases the insulation value of the covers. These are of proven quality, which means that goods remain at a stable temperature even during long-term transport and regardless of external conditions.

Applications

Pallet covers can be used both to keep products chilled during transport and to keep products warm, if need be. If you want to transport refrigerated, you can use the pallet covers in combination

with cooling elements, such as gel packs. This solution is often used for long transports of potatoes and vegetables and fruit, such as mushrooms and soft fruit.

Because the pallet covers are made from one piece, warm air cannot reach the products. It is wise to cover the bottom of the pallet well, so that warm air cannot find its way to the vulnerable products in any way. In this way, your goods can remain cooled for a long time, without the need for electricity during transport. This gives you the flexibility to transport your goods sequentially using different means of transport. For example, the pallet covers are frequently used during air transport.

Delivery

The pallet covers are available in suitable measurements for both Europallets and Blockpallets. There are various possibilities regarding the height of the pallet cover as well. Get in touch to discuss possibilities!

Product	Measurements
Pallet cover Europallet	83x123x148,5 cm
Pallet cover Blockpallet	103x123x148,5 cm
